

SFT: delayed inputs, weighted sum

```
d0 <= x; d1 <= d0; ...  
acc = 19*d0 + 28*d1 + ... + 37*d12;  
y <= acc[15:0];
```

Input registers feed one weighted-sum expression.

RF: registered partial sums

```
a0 <= 19*x + a1;  
a1 <= 28*x + a2; ... a12 <= 37*x;  
y <= a0[15:0];
```

Each partial sum is stored in a register.
